PRODUCT INFORMATION

FOLIAR APPLICATION:

CROP PLUS™ 4-4-1 can be applied to most vegetable crops, row crops, deciduous fruit and nut trees, citrus, avocados, grapes, melons, ornamentals, turf, pasture, range grasses, and most other crops.

CROP PLUS™ 4-4-1 is designed to supplement a well balanced fertilizer program and ensure the plants obtain proper nutrients during high growth periods which is so essential to high yields.

CROP PLUS™ 4-4-1 will help protect crops from nutrient deficiencies during those crucial growing periods when any drop in nutrients will result in a production drop.

CROP PLUS™ 4-4-1 is a highly concentrated nutritional fluid. It is designed to meet the need for a soluble liquid minor element spray containing certain nutrients proven to be of value when applied as a properly timed foliage spray.

CROP PLUS™ 4-4-1 is readily available for plant food and non phytotoxic when used as directed. It is absorbed through the leafy tissue of the plant and quickly translocated to deficient areas of the plant.

CROP PLUS™ 4-4-1 is compatible with most insecticides and minor elements. It is designed for use as a supplement to a well balanced fertilizer program.

CROP PLUS™ 4-4-1 nutrients can be applied by conventional ground rig, concentrate sprayer, and by air.

CROP PLUS™ 4-4-1 has excellent buffering properties due to its acidity (pH 1 to 1.5). The use of additional buffering agents may result in crop damage.

APPLICATION RATES

GENERAL FIELD CROPS:

Apply 1/2 to 1 gallon/acre. For best results, make multiple applications beginning at early season and continue throughout the growing season.

CITRUS: Apply 1/2 to 1 gallon per acre at early spring flush, followed by a second application in 10-14 days. Use 20 gallons water in conventional ground application. For aerial, use 5 gallons water minimum. Repeat at 10-14 day intervals until crop matures or harvest is completed.

AVOCADO: Apply 1/2 to 1 gallon per acre beginning at early spring flush. Repeat at 7-10 days throughout the growing season.

KIWIS: Apply 1/2 to 1 gallon per acre. Begin application prior to bloom and continue applications at 5-7 day intervals until fruit begins to size.
