PRODUCT INFORMATION

GENERAL INFORMATION

ENHANCE ORGANICS is a newly formulated fertilizer which allows nutrients to move freely in the soil. The fertilizer is protected by natural carriers developed by Western Nutrients Corporation.

ENHANCE ORGANICS is a complex formulation allowing quick movement of nutrients in the soil and promoting rapid absorption of nutrients through the root

ENHANCE ORGANICS is designed to promote healthy seed and root development as well as a strong and healthy cell structure by providing a fast method of increasing **nutrient** levels in the plant during critical growing periods.

GENERAL USE

ENHANCE ORGANICS can correct nutrient deficiencies under many soil conditions ranging from high organic matter (clay) to very low organic matter and from strong acid soils (pH 3) to high alkaline soils (pH 3.5) containing calcium carbonate free lime. ENHANCE ORGANICS can be used on most crops.

ENHANCE ORGANICS is unique because it can be incorporated in all types of fertilizer applications. The ENHANCE ORGANICS product can be banded, side dressed, applied through drip systems, sprinklers and foliar applications.

ENHANCE ORGANICS is designed to Fortify, Produce Set and Hold.

APPLICATION RATES

Drip Systems and Drip Tape:

1-4 quarts (1-4 liters) per acre, application depending on the crop and its growth stage. If a pre-plant fertilizer is used, a total of 2-5 gallons (8-19 liters) ENHANCE ORGANICS is recommended. If a pre-plant fertilizer is not used a total of 5-10 gallons (19-38 liters) ENHANCE ORGANICS per acre throughout the growing season is recommended.

If soil and petiole tests show a deficiency in micronutrients WESTERN NUTRIENTS START UP line should be added to ENHANCE ORGANICS. START UP chelated micronutrients should be added at the rate of 1/2 pint per gallon (1/4 liters per 4 liters) of ENHANCE ORGANICS. If a number of micronutrients are deficient do not exceed 1 pint (1/2 liter) START UP products per gallon (4 liters) of ENHANCE ORGANICS. For best results to obtain additional micronutrient boost use WESTERN NUTRIENTS NUTRAPLEX or MICRO PLUS foliar lines of products.

Sprinkler Systems and Flood Irrigation:

These systems are not as effective for fertilizer application as drip system. For best results follow drip recommendations. A pre-plant or side dress application often is required for this type of irrigation system.

Foliar Application and Air or Ground Rig:

Tree Crops: 1 quart (1 liter) per acre Vegetable Crops: 1 pint (1/2 liter) per acre Field Crops: 1 pint (1/2 liter) per acre

Dilution Rates: Use a minimum of 10 gallons (38 liters) of water per acre.

General Field Rates: As needed.
