

NUTRAPLEX®

MULTI-MIX MAGNESIUM

To Prevent and Correct Micronutrient Deficiencies

GUARANTEED ANALYSIS

Magnesium (Mg)	1.00%
Sulfur (S)	4.00%
Iron (Fe)	1.00%
Manganese (Mn)	1.00%
Zinc (Zn)	4.00%

Derived from Iron Sulfate, Zinc Sulfate, Manganese Sulfate and Magnesium Sulfate. Sulfur derived from Sulfuric Acid. Complexing agent derived from a Lignosulfonate.

PRODUCT INFORMATION

CROPS

NUTRAPLEX Multi Mix Magnesium can be applied to most vegetable crops, row crops, deciduous fruit and nut trees, citrus, avocados, grapes, melons, ornamentals, turf, pasture, range grasses, and most other crops.

NUTRAPLEX Multi Mix Magnesium is a complexed liquid micronutrient for foliar and soil application to agricultural crops. NUTRAPLEX Multi Mix Magnesium is beneficial in combination with plant food and non-phytotoxic when used as directed. It is absorbed through the leafy tissue and root system of the plant and quickly translocated within the plant. NUTRAPLEX Multi Mix Magnesium is compatible with most insecticides, fungicides, herbicides, liquid fertilizer, and other foliar micronutrients. It is used on most field and row crops, trees, vines, turf, and ornamentals. NUTRAPLEX Multi Mix Magnesium can also be used as an acidifying and dispersing agent in water solutions.

NUTRAPLEX micronutrients have corrected deficiencies of a great many row crops, vegetables, and ornamental plants under soil conditions ranging from high organic matter (muck) to very low organic matter and from strong acid soils (pH 3) to high alkaline soils (pH 8.5) containing considerable calcium carbonate (free lime). NUTRAPLEX can be effective under most varied farming conditions. Differences in soil conditions, climate and plant varieties will determine how much more effective NUTRAPLEX micronutrients are than other sources of micronutrients.

NUTRAPLEX micronutrients are unique in that they can be used in most forms of liquid fertilizers including ammonia solutions. NUTRAPLEX micronutrients can be broadcast on the surface of the soil in water solutions, in fluid fertilizers including suspensions, or in panicalate form. This micronutrient can be banded at planting time, side dressed, or sprayed in water solutions directly on deficient plants. Under irrigation, NUTRAPLEX micronutrients can be added to the water of gravity and sprinkler systems. Under dry land conditions, NUTRAPLEX micronutrients can be applied ahead of disking, plowing or listing. When applied to soil, NUTRAPLEX micronutrients can be used in combination with a nitrogen fertilizer source.

SOIL APPLICATION RATES

MAINTENANCE APPLICATIONS	1 qt/acre (1 liter)
MODERATE DEFICIENCY	1/2-1gallon/acre (2-4 liters)
HEAVY DEFICIENCY	1-2 gallons/acre (4-8 liters)

In soil applications the usual carrier is water used at a rate sufficient for thorough coverage. NUTRAPLEX Multi Mix Magnesium can be applied with liquid fertilizers as a broad-castor banded treatment. Use NUTRAPLEX at a maximum rate of 1 part NUTRAPLEX to 50 parts fertilizer in ammonium phosphate solutions and 1 part NUTRAPLEX to 10 parts fertilizer in nitrogen solutions.

FOLIAR APPLICATION RATES

TREE CROPS 1/2-1 gallon/acre (2-4 liters)

Apply NUTRAPLEX Multi Mix Magnesium on tree crops using the following dilution rates:

Aerial application: Use a maximum of 1 quart (1 liter) of NUTRAPLEX Multi Mix Magnesium per 5 gallons (20 liters) of water.

Dilute spray: Use a maximum of 1 gallon (4 liters) of NUTRAPLEX Multi Mix Magnesium per 200-500 gallons (800-2000 liters) of spray solution.

Concentrated spray: Use a maximum of 1 gallon (4 liters) of NUTRAPLEX Multi Mix Magnesium per 50-150 gallons (200-600 liters) of concentrated spray solution.

If trees are sprayed several times a year the above application rates can be split according to the number of yearly applications. Split applications are considered more beneficial than single applications.

VEGETABLE CROPS 1-2 pts/acre (1/4 - 1/2 liter)

Use a minimum of 10 gallons (40 liters) of water per acre.

FIELD CROPS 1 - 4 pts/acre (1/4 - 1 liter)

Apply NUTRAPLEX Multi Mix Magnesium on field crops using the following dilution rates:

Aircraft and low volume sprayers: Use a minimum of 10 gallons (40 liters) of water per acre.

Conventional sprayers: Use a minimum of 20 gallons (80 liters) of water per acre.

SPREADER

NUTRAPLEX Multi Mix Magnesium can be used as a spreader at 1-2 quarts (1-2 liters) per 100 gallons (400 liters) of water.

ACIDIFYING

NUTRAPLEX Multi Mix Magnesium has an acidifying effect on high pH water.
