APPLICATION METHOD & SAFETY:	A compatibility test is recommended if mixing NUTRAMIX PK in a tank mix. User assumes full responsibility for product, equipment and plant compatibility. Upon foliar application, the phosphite ions are taken up directly by the plant foliage and may undergo a degree of conversion to phosphate ions, or be utilized directly by the plants, as phosphite ions. As a soil application to annual crops, a lesser response from the initial crop, with a corresponding superior response from succeeding crops, may be observed. In addition, placement close to seeds or root zones may be injurious to crops. The effect may be aggravated by a soil pH below 6.5.
