

HUMIPLUSTM ULTIMATE + ZN

5-19-0

Contains (THA) Technical Humic Acids GUARANTEED ANALYSIS

Total Nitrogen (N).....	5.00%
6% Ammoniacal Nitrogen	
Available Phosphoric Acid (P ₂ O ₅).....	19.00%
Zinc (Zn).....	0.15%

Derived From: Super Phosphoric Acid, Anhydrous Ammonia and Zinc Complex.

Also contains **NON-PLANT FOOD INGREDIENT:**
2.5% Humic Acid derived from Leonardite.

Information regarding the contents and levels of metals in this product is available on the internet at <http://www.aapfco.org/metals.html>

PRODUCT INFORMATION

CROPS

HUMIPLUS ULTIMATE Liquid Nutrients can be applied to most vegetable crops, row crops, deciduous fruit and nut trees, citrus, avocados, grapes, melons, ornamentals, turf, pasture, range grasses, and most other crops.

HUMIPLUS ULTIMATE is a new liquid plant food developed for use as a foliar feed, a regular plant food applied to the soil, and as a starter plant food with the seed or transplant.

HUMIPLUS ULTIMATE liquid nutrients contain ENHANCE[®] (THA) Technical Humic acids. ULTIMATE nutrients are beneficial in combination with plant food and non-phytotoxic when used as directed.

ULTIMATE nutrients with (THA) Technical Humic Acids are unique as they can be used in most all forms of liquid fertilizers. ULTIMATE nutrients can be banded at planting time, side-dressed or sprayed in water solutions directly on deficient plants. Humic Acids may aid in the uptake of micro-nutrients.

HUMIPLUS ULTIMATE liquid nutrients have corrected deficiencies of a great many row crops, vegetables, and ornamental plants under soil conditions ranging from high organic matter (muck) to very low organic matter and from strong acid soils (pH 3) to high alkaline soils (pH 8.5) containing considerable calcium carbonate (free lime). HUMIPLUS ULTIMATE is effective under dry land and irrigation farming conditions. Differences in soil conditions, climate and plant varieties will determine how much more effective HUMIPLUS ULTIMATE liquid nutrients are than other sources of nutrients.

Remember, these humic acid products are used to **fortify, produce, set and hold**. It is important that timely applications are made to achieve these results.

CAN BE USED IN HOME & GARDEN

APPLICATION RATES

GENERAL APPLICATION RATES

HUMIPLUS ULTIMATE should be used on most crops in a foliar application at the rate of 1-4 quarts (1-4 liters) per acre. Four timely applications give the best results. **HUMIPLUS ULTIMATE** should always be used any time the plant, tree, or vine is in a stress situation to fortify the plant and maintain sufficient levels of nitrogen and phosphorous.

SOIL AND SIDE DRESS APPLICATION RATES

Soil: 5 to 30 gallons (20 - 120 liters) per acre.

HUMIPLUS ULTIMATE can be applied pre-plant, at planting time or sidedressed after the crop has emerged. The usual carrier is water or liquid fertilizer. Sidedress: 5 to 30 gallons (20 - 120 liters) per acre at planting or within a few weeks after planting.

FOLIAR APPLICATION RATES

Tree: Start as early as possible, usually at bud stage or just prior to first bloom and continue at 10-15 day intervals. Use 2-3 quarts (2-3 liters) per acre. The second, third, and fourth applications should come at petal fall and then two more applications after petal fall. These timely applications will insure sufficient levels of nitrogen and phosphorous to hold the set intact.

Vegetable Crop: Apply at the rate of 1-2 quarts (1-2 liters) per acre just prior to first bloom, or when the plant is 3-4 inches high, and continue at two week intervals. These applications can be made during a regular spray program. This practice will give a more uniform maturity, higher yields, larger fruit, better color and a stronger root system.

Field Crop: Apply at the rate of 1 -2 quarts (1-2 liters) per acre, just prior to bloom, or when the plant is 3-4 inches tall. Four timely applications should be made during a regular spray program.

Cotton: Apply at the rate of 2-3 quarts (2-3 liters) per acre, when the first true leaves appear, one week before peak bloom, followed by 2 more applications at two week intervals just after peak bloom.

Wheat and Other Small Grain: Apply at the rate of 2-4 quarts (2-4 liters) per acre at boot stage, or when the plant is 8 to 10 inches tall and again when the grain heads out. This can be done during a regular spray program. This practice will increase the number of heads and give a heavier bushel weight.

Grapes-General Application: Apply at the rate of 1-2 quarts (1-2 liters) per acre, when the canes reach 15-20 inches in length, at buckshot stage, or after shatter. This practice will produce a heavier yield, bigger grapes, earlier harvest, and higher sugar content.

Table Grapes: Apply 1 quart (1 liter) per acre of HUMIPLUS ULTIMATE when bunches attain a length of 2-4 inches.

Wine Grapes and Raisins: Apply 2 quarts (2 liters) per acre of HUMIPLUS ULTIMATE from time canes are 2 inches in length to shortly before bloom, immediately after shatter and 2-3 weeks after shatter.

DILUTION RATES

Aircraft and low volume sprayer: Use a minimum of 5 gallons (19 liters) of water per acre.

Conventional Sprayers: Use a minimum of 20 gallons (76 liters) of water per acre.

Dilute Spray: Use 200-500 gallons (757 - 1892 liters) of spray solution per acre.

Concentrated Spray: Use 50-150 gallons (189 - 568 liters) of concentrated spray solution per acre.

Note: A wetting agent or spreader can be used when applying HUMIPLUS ULTIMATE.
